```

The "_5" in "0.73_5" is FreeBSD'ish. i.e. the version of the change of the port. The history is here: <https://www.freshports.org/print/muttpriint/#history>. I don't know why the 0.73 source is not available. I have it in my build server:

```
[guru@jet /usr/ports/distfiles]$ ls -l muttpriint-0.73.tar.gz
-rw-r--r--  1 root wheel 361268 Dec 26  2008 muttpriint-0.73.tar.gz
```

I could make it available on my Internet host. About any RPM I don't know much. On my Linux mobilephone, running a Debian I see:

```
$ apt search muttpriint
muttpriint/byzantium 0.73-10 all
  Pretty printing of mails

muttpriint-manual/byzantium 0.73-10 all
  Manual for muttpriint
```
